

Course Schedule for Global Health Core and Electives

On the following pages is a list of core courses as well as approved electives. (Please remember that **either** PHS 640 **or** PHS 644 is required, depending on your planned experience.) Global health faculty review and update this list of electives annually. While the *UW-Madison timetable remains the principal resource* for course information, this list can help students identify appropriate courses across a broad array of departments and schools.

Criteria for Global Health Electives:

- Course objectives are aligned with some or all core competencies of the Certificate in Global Health.
- A substantial portion of the course content pertains to health in an international setting or deals with international populations in the U.S.
- The class is a graduate level course. (Note: Undergraduate courses which have content highly relevant to global health may be included as electives with the approval of the Certificate Director.)
- *The course may not be part of the student's required core curriculum for their degree program.*

Special Requests to Count Electives toward the Certificate in Global Health

In addition to the approved electives, students may petition to be granted an exception to include other electives toward their certificate. These petitions should be made in writing and should include a brief explanation of why the course is relevant for the student's particular global health goals and course of study. *It is the responsibility of the student to attach a copy of the syllabus of the course in question, as well as a summary of global health courses taken to date.* These requests will be reviewed by the Certificate Director and Faculty Advisor in light of the following criteria:

- The class is 400 level or higher. (If 300 level or less, review and approval is required.)
- The course topic is relevant for global health as it pertains to the student's particular career path.
- A significant proportion of the course content pertains to health in an international setting or deals with health-related issues in international populations in the U.S.
- In the case of area studies courses that do not emphasize health as a major theme, the student's major paper should be written on a health topic and submitted to the certificate program director.
- The course may not be part of the student's required core curriculum for their degree program.

Classes separated by type/semester offered (Core Classes, Fall/Spring/Summer Electives)

Core Classes

Updated for Spring 2017

Dept/Number	Title	Instructor	Meeting time	Cr.
PHS 718	Fundamentals of International Health Care Systems	Solheim *7-8 week session See timetable for dates	Fall 2017	2
